

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner *

Repository name *

futureense

futureense is available.

Great repository names are short and memorable. Need inspiration? How about [ideal-lamp](#) ?

Description (optional)

For the futureense internship

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: None

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License: None

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

The screenshot shows the GitHub repository page for 'futureense' by user 'Idlimama'. The repository is public and has 1 branch and 0 tags. The main branch is selected. The repository contains a single commit, 'Initial commit', which includes a file named 'README.md'. The README content is 'futureense' followed by 'For the futureense internship'. The right sidebar shows the repository's statistics: 0 stars, 1 watching, and 0 forks. There are no releases or packages published yet.
